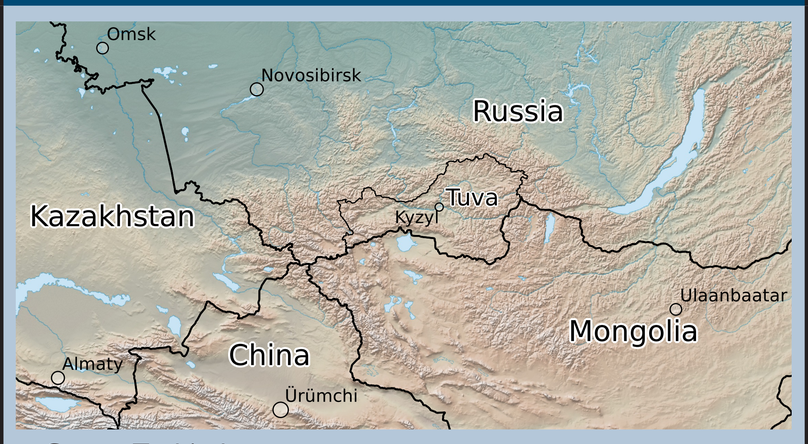
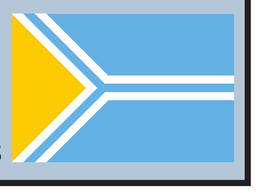
Tuvan



- Sayan Turkic language
- Spoken in the Tuva Republic
- Approximately 300,000 speakers
- Agglutinative morphology
- Very little work on computational tools



Example

« Бис кожууннуң соңгукчулары-биле ажылды чорутпастай бээривиске, көргүзүглер баксыраан. »

"Figures worsened when we stopped conducting business with the district's constituents."

```
^Бис/бис<prn><pers><p1><pl><nom>$
^кожууннуң/кожуун<n><gen>$
^соңгукчулары/соңгукчу<n><pl><px3sp><nom>$
^-биле/биле<post>$
^ажылды/ажыл<n><acc>$
^чорутпастай/чорут<v><tv><cess><prc_impf>$
^бээривиске/бер<vaux><ger_aor><px1pl><dat>$
^,/,<cm>$
^көргүзүглер/көргүзүг<n><pl><nom>$
^баксыраан/баксыра<v><iv><past><p3><pl>$
^./.<sent>$
```

Lexicon contents ↗

Part of speech	Tag	Stems
Noun	<n>	4,226
Proper noun	<np>	4,217
Adjective	<adj>	1,603
Verb	<v>	1,064
Adverb	<adv>	136
Numeral	<num>	85
Conjunction	<cnj*>	70
Postposition	<post>	28
Pronoun	<prn>	35
Determiner	<det>	26
Total		11,490

Morphological Transducers

Morphological transducers

- Efficient (in speed & size) models of a language's morphology
- Take a surface form, and produce valid lexical form(s)
- Take a lexical form, and produce valid surface form(s)

  алдым ↔ ал<v><tv><ifi><p1><sg>, алд<n><px1sg><nom>
  өөнде ↔ өг<n><px3sp><loc>

Framework: HFST

- Reimplements Xerox FST formalisms (`lexc` & `twol`)
- Also provides a wrapper around popular free/open-source FST toolkits: SFST, OpenFST, and Foma

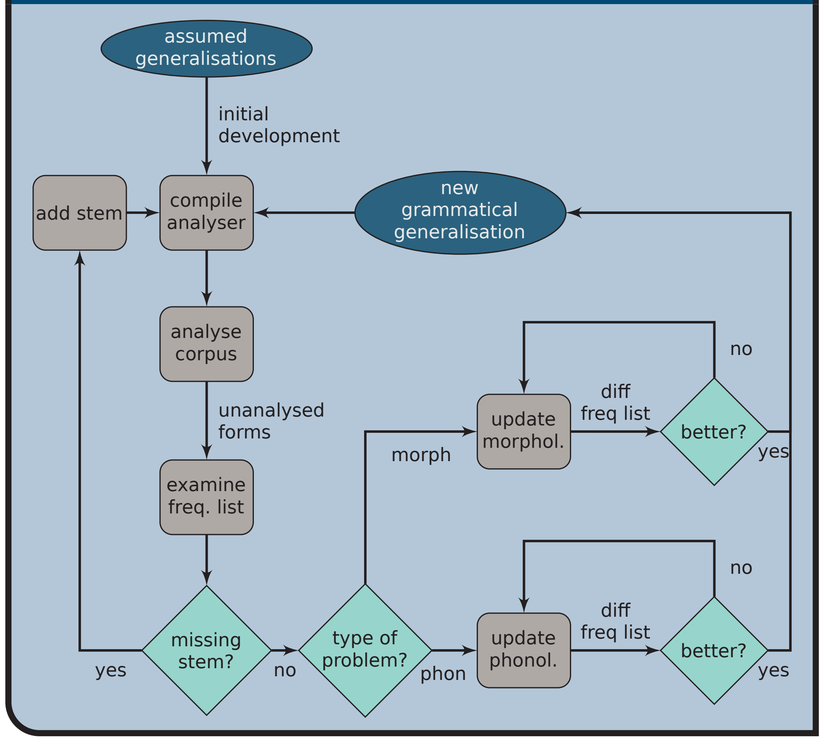
Approach

- two-level method (Koskenniemi, 1983)
- **morphotactics** implemented in `lexc`
- **morphophonology** implemented in `twol` (SPE-style rules)
- compiled separately; compose-intersected to single transducer

  алдым ↔ ал>{D}{I}>м ↔ ал<v><tv><ifi><p1><sg>
  алдым ↔ алд>{I}м ↔ алд<n><px1sg><nom>
  өөнде ↔ өг>{z}{I}{n}>{D}{A} ↔ өг<n><px3sp><loc>

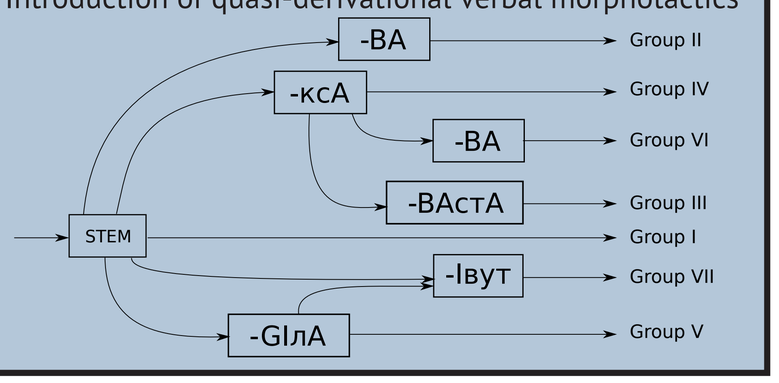
What should we put here

Development cycle



Morphotactics

- Introduction of quasi-derivational verbal morphotactics



Ongoing and future work

our other Turkic-language transducers

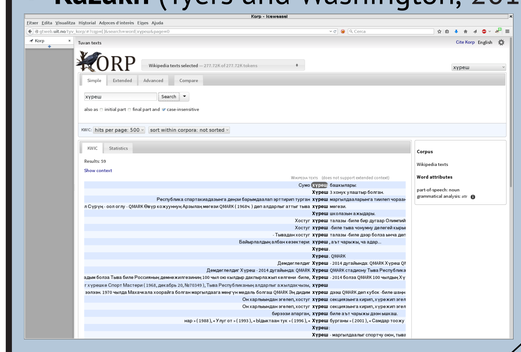
- **Kyrgyz** (Washington et al., 2012)
- **Tatar** & **Bashkort** (Tyers et al., 2012)
- **Kazakh** (Salimzyanov et al., 2013)
- **Kumyk** (Washington et al., 2014)
- ongoing work on Sakha, Khakas, and more!

Morphological disambiguation

- **Kazakh** (Assylbekov et al., 2016, forthcoming)

Treebanks

- **Kazakh** (Tyers and Washington, 2015)



- work on **Tuvan** ongoing

Future work

- Dependency parsing (native and crosslingual)
- Increase number of stems
- Make more available to linguists
- Integrate into end-user applications (spellchecking, MT)

Evaluation

5-part corpus for naïve coverage

Domain	Tokens	Coverage (%)
News	1,539,459	95.73
Religion	746,124	93.84
Literature	297,830	91.96
Encyclopaedic	276,547	90.86
Folklore	27,902	91.57
Average	–	92.79

Naïve coverage results

	count	precision	recall
known tokens	1024	0.99	0.97
all tokens	1425	0.99	0.69

Qualitative evaluation

error type	count	percentage
Missing stem	364	78.8
Other	65	14.1
Bad morphotactics	19	4.1
Bad phonology	8	1.7
Incorrect categorisation	6	1.3
Total:	462	100
