GPL (=free and open)!

Framework: HFST

- Reimplements Xerox FST formalisms (lexc & twol)
- Also provides a wrapper around popular free/open-source FST toolkits: SFST, OpenFST, and Foma

Development effort

- Kumyk transducer based on Kazakh, Tatar transducers
- ~1 week to reach 80% coverage, +1 week to reach 90%

- Other Turkic transducers: 0-derivation (overgenerates)
- Our approach: categorization (e.g., adjectives, below)

| Type | Gloss | <adj>(<comp>) | <adj><subst>(<comp>) | <adj><advl>(<comp>) |

Evaluation measures

- Naïve coverage** - percentage of surface forms in a given corpus receiving ≥ 1 analysis
- Mean ambiguity** - average number of analyses for each surface form found in analysed corpus
- Precision** - of a form’s analyses, % correct
- Recall** - % of analyses provided by transducer that are correct for a form, by comparing against a gold standard
